November 2021

Dear Health Care Professional,

Earlier this year, Merck communicated the decision to discontinue all VAQTA[®] (Hepatitis A Vaccine, Inactivated) single-dose and 10-pack vials and will solely offer the 10-pack of prefilled single-dose Luer-Lok[®] syringes (NDC 0006-4095-02 and NDC 0006-4096-02) moving forward. This decision was not related to any product safety or manufacturing issues with VAQTA.

Merck has now depleted inventory of all vials and is no longer offering vials for purchase. You may be able to purchase single-dose and the 10-pack of vials through wholesalers and physician distributors until they deplete their remaining inventory.

Merck has adequate supply of the 10-pack of single-dose prefilled syringes of VAQTA to cover the discontinuation of the 10-pack of single-dose vials in the United States, and to support your transition for VAQTA from vials to prefilled syringes. Please note that the 10-pack of single-dose prefilled syringes of VAQTA is priced the same as the 10-pack of single-dose vials.

We thank you for your business and your commitment to Merck Vaccines.

If you have any questions, please contact your Merck account representative, or call the Merck Vaccine Customer Center at 877-VAX-MERCK (877-829-6372).

Sincerely,

Merck Professional Services
